A: I want to go through a few points. Stemming In case of stemming, the only thing you should do is to take out inflection of words. But if you want it to be done by regular expression, you can't be done by a simple way. You should use more complex methods to extract meaning from the words. Most commonly, it will be done with stemming. Stopwords Stopwords is the words or phrases that have little or no meaning and they don't contain in a word. That means, there are no special meaning for the word 'a' and 'an'. Stopwords, including prepositions or articles and such are generally taken out. It would be better to know more about your data and see if it contains stopwords and you have to stop them or not. There is a list of stopwords available online.

Stopwords that are required to be taken out: "a", "an", "the", "and", "but", "for", "or", "so", "to", "from" "do", "is" "don't", "won't", "can't", "can", "will", "that" "as", "if", "when", "where" "why", "how", "other", "same", "on", "each", "every" "who",

"whom", "what" "which" Here are some stopwords and you can see what they are and what they mean. Conjugation In case of conjugation, you need to change the ending of the words with the help of different tense. For example, you have a word 'chair' and you use 'to' as a verb and it becomes 'I chair him'. That is one of the most common conjugations and you can find other in You should know about the subject and the object. Conjugation of object with another noun - he ate the soup Conjugation of object with a verb - she woke up Conjugation of object with adjective - she is tall You can change the word based on that.
